如果控制器是直接通过代码创建出来的,并且调用方法为 [[YFViewController alloc]init] 创建VC的生命周期为:

```
-[YFViewController initWithNibName:bundle:]
-[YFViewController init]
-[YFViewController loadView]
-[YFViewController viewDidLoad]
-[YFViewController viewDidAppear:]
```

如果创建控制器时勾选了XIB,那么调用方法为 [[YFViewController alloc]init] 创建VC时的生命周期为:

```
-[YFViewController initWithNibName:bundle:]
-[YFViewController init]
-[YFViewController loadView]
-[YFViewController viewDidLoad]
-[YFViewController viewDidAppear:]
```

如果是通过SB创建控制器,那么VC的生命周期为:

```
-[ViewController initWithCoder:]
-[ViewController awakeFromNib]
-[ViewController loadView]
-[ViewController viewDidLoad]
-[ViewController viewDidAppear:]
```

如果纯代码创建UIView,调用方式为 YFView *yfView = [[YFView alloc]init]; 那么它的生命周期为:

```
-[YFView initWithFrame:]
-[YFView init]
-[YFView layoutSubviews]
```

如果纯代码创建UIView, 调用方式为 YFView *yfView = [[YFView alloc]initWithFrame: [UIScreen mainScreen].bounds]; 那么它的生命周期为:

```
-[YFView initWithFrame:]
-[YFView layoutSubviews]
```

如果通过XIB创建UIView,调用方式为 NSArray *array = [[NSBundle mainBundle]loadNibNamed:@"YFView" owner:nil options:nil];[array lastObject]; 那么它的生命周期为:

- -[YFView initWithCoder:]
- -[YFView awakeFromNib]
- -[YFView layoutSubviews]
